

Data Modelling and Form Design

Aim

To design and develop a **Gym Membership Application Form** using Zoho Creator by creating a structured form, applying appropriate validations, and generating a report for managing member registrations and subscriptions.

Theory

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

In this experiment, a **Gym_Membership_Form** is designed to collect member details, contact information, health and fitness goals, membership tier preferences, and terms & conditions consent. The form is divided into four sections:

1. **Personal Details:** Member Name, Date of Birth, Gender, and ID/PAN Number.
2. **Contact Details:** Email Address, Phone Number, and Residential Address.
3. **Fitness & Health Profile:** Emergency Contact Details, Fitness Goals, and Existing Medical Conditions/Injuries.
4. **Membership Details & Consent:** Membership Plan Type (e.g., Monthly, Quarterly, Annual), Preferred Time Slot, Start Date, and Terms & Rules Consent.

Procedure

1. Open **Zoho Creator** and create the **Gym Membership Management** application.
2. Create the **Gym_Membership_Form**.
3. Add the required fields for personal, contact, health, membership plan, and consent details.
4. Organize the fields into the four specified sections (Personal Details, Contact Details, Health & Fitness Profile, and Membership Details & Consent).
5. Configure mandatory fields and apply the required validation rules (e.g., minimum age limit, mandatory agreement checkbox).

6. Save and preview the form.
7. Enter sample member details and submit the form.
8. Create the Gym_Membership and verify the submitted records.
9. Filter and sort the records based on membership type (e.g., Monthly/Annual) and start date for effective subscription management.

Output

The screenshot shows a web application interface for a gym membership form. The left sidebar contains a menu with 'gym_membership' and 'gym_membership Report'. The main area displays the 'gym_membership' form with the following fields:

- Name: First Name and Last Name input fields.
- age: A text input field containing '18'.
- Image: A 'Select Image' button with an upload icon.
- Phone: A text input field with a country code dropdown set to '+91' and the number '81234 56789'.
- Email: A text input field.
- Address: Address Line 1 and Address Line 2 input fields.
- City / District: A text input field.
- State / Province: A dropdown menu set to '-Select-'.
- Postal Code: A text input field.
- Country: A dropdown menu.
- emergency contact number: A text input field.
- fitness goal & medical condition: A text input field.
- start date: A date input field with the format 'dd-MM-yyyy'.

The screenshot shows the 'gym_membership Report' table in the web application. The table has the following columns: Name, Phone, Email, Address, emergency contact number, age, and fitness goal & medical condition. The table contains one record for 'abin raj'.

Name	Phone	Email	Address	emergency contact number	age	fitness goal & medical condition
abin raj	+917550286466	abinraj590@gmail.com	tvk nagar , chennai, chennai, tamilnadu, 600050, India	35365477645	18	weight loss and muscle building

Result

The **Gym Membership Application Form** was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted member applications were successfully stored and displayed in the Gym_Membership for effective onboarding and membership tracking.
